

MOUNTING INSTRUCTION ON DOOR STORAGE

Elfa's On Door storage solution makes use of otherwise wasted space on the door. No tools required, quick installation with over door hooks. Add baskets and boards of different sizes. Can also be attached with screws onto the wall.

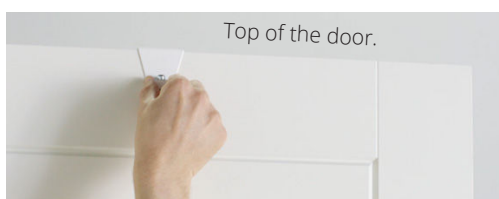

You need the following to assemble your solution:

- Leveller
- Drill/screwdriver (when mounting on wall)

Before mounting, make sure the inner door you are mounting on is around 40 mm thick and between 2010-2150 mm in height. Also make sure that the wallband you are using is the H: 198 wallband.

Also make sure that the door is set straight.

MOUNTING ON DOOR

1. Start by positioning the upper piece of the Over door hook set on top of the door.

2. Slide on the wallband in the **second** pair of slots, counting from the top.

3. Continue by sliding in the lower piece of the Over door hook set into the wallband – most likely the third and fourth slots from the bottom of the wallband.

Preferably, use a leveller to ensure the wallband is straight

Use the Allen key that is included in the Over door hook set to tighten the hook. Turn the key until you feel the wallband being tightened at the bottom attachment.

Start to attach the storage functions for your On Door storage solution by sliding them into the wallband, making sure that the teeth are completely sunk down into the slots.

MOUNTING ON WALL

If you want to mount directly on a wall, you won't need an Over door hook – just fasten directly into the wall.

Fasten the wallband with a screw in the upper hole.

Preferably, use a leveller in order to determine that the wallband is straight, before fastening the other screws through the holes in the wallband.
